

Ho Viet Bao Long

Computer Science Student

(+84) 932 531 050 | hvblong23@gmail.com | github.com/lob23

EDUCATION

VNUHCM - University of Science

Bachelor of Science in Computer Science, Faculty of Information and Technology

GPA(current): 9.05/10.00 (Thesis: 10/10)

Ho Chi Minh City, Vietnam

Sep 2021 - now

EXPERIENCE

Critical Infrastructure Cybersecurity Graduate Fellowship Program

OPSWAT

Nov 2024 - Dec 2024

Ho Chi Minh city, Vietnam

- Exploring CVEs in the fields of IT and OT.
- Developing a Proof of Concept (PoC) and demonstration for CVEs.
- Enhancing existing systems to mitigate and prevent cybersecurity attacks.

Application Security Research (University Research Project)

Computer Security Club, HCMUS

Nov 2023 - Sep 2025

Ho Chi Minh city, Vietnam

- Studying and examining mobile applications to understand and clarify data privacy practices in Vietnam.
- Conducted structured documentation and user survey analysis to extract insights into Vietnamese Android users' privacy behaviors and awareness.
- Analyzing the potential risks of adversarial attacks in machine learning and deep learning models.

SKILLS

Programming Languages: Python, C++, Java, Bash (Shell scripting).

Tools: Amazon services, Docker, MongoDB, Firebase, SQL Server.

Languages: Vietnamese (Native), English (Fluent).

RESEARCHES AND PROJECTS

Privacy Analysis of Vietnamese Financial and Medical Android Applications

University project

Jan 2025 – Aug 2025

- Tech stack: Python, Java, JavaScript, Bash (Shell scripting)
- Combining permission-based analysis and network traffic inspection to assess user privacy in Android financial and medical applications.
- Implemented a toolchain to capture Android network traffic and filter harmful ads/trackers, including techniques to analyze apps that use certificate pinning.
- Collecting and processing user comments using NLP to assess the scope and nature of privacy concerns.

Adversarial Attack Evaluation on YOLOv8

University project

July 2024 – Sep 2024

- Tech stack: Python
- Evaluation of Black-Box and Transfer Attacks on the State-of-the-Art YOLOv8 Model.
- Evaluated YOLOv8's vulnerability on a Vietnamese traffic signs dataset to FGSM and PGD attacks, with adversarial samples generated on YOLOv8 and transferred from YOLOv5.

PUBLICATIONS

Bao-Long Ho, Tran-Tran Trinh, Minh-Triet Tran, and Anh-Duy Tran, “**A Systematic Cross-Analysis of Privacy Risks in mHealth Android Applications in Vietnam**”, Proceedings of the 18th International Conference on the Quality of Information and Communications Technology (QUATIC), Lisbon, Portugal, 2025.
